

▮ AIMS: AI-Managed Solutions - Complete Containerization Strategy

Containerization Compatibility Assessment

✓ CAN Be Containerized

Tool	Status	Method	Notes
Claude Code	✓ YES	Docker Sandboxes	Docker now offers official MicroVM-based sandboxes for Claude Code ^[1] ^[2]
Claude Agent SDK	✓ YES	Docker/gVisor	Designed for containerization with isolation ^[3] ^[4]
OpenClaw	✓ YES	Docker Manager	Hostinger has official support as of Jan 2026 ^[5]
Agent Zero	✓ YES	Docker	Full support, requires custom prompts ^[5]
ii-agent	✓ YES	Docker	Python-based, containerizable ^[5]
II-Commons	✓ YES	Docker	RAG/knowledge base service ^[5]
KiloCode	✓ YES	Docker	Task executor ^[5]
n8n	✓ YES	Docker template	Recommended KVM 2+ for n8n ^[5]

✗ CANNOT Be Containerized (Desktop Tools)

Tool	Why Not	Alternative
Google Antigravity	Desktop IDE (VS Code-like)	Can manage Docker containers via MCP ^[6] ^[7]
VS Code	Desktop application	Use as local dev tool
Claude Desktop	Native app	Use Claude Code (CLI) instead

▮ REVISED CONTAINERIZATION STRATEGY FOR AIMS

Core Philosophy: "We Dockerize Everything So You Don't Have To"

AIMS specializes in taking complex OSS tools and packaging them as **turnkey containerized services** with:

- ✓ Automated configuration
- ✓ Exposed web UIs
- ✓ Secure defaults
- ✓ One-click deployment
- ✓ Customization layers for advanced users

▮ UPDATED Docker Compose Architecture

```
version: '3.8'

services:
  # =====
  # FRONTEND - Next.js Application
  # =====
  frontend:
    build: ./services/frontend
    container_name: aims-frontend
    expose:
      - "3000"
    networks:
      - aims_net
    environment:
      - NODE_ENV=production
      - NEXT_PUBLIC_ACHEEVY_URL=http://acheevy-engine:8000
      - NEXT_PUBLIC_OPENCLAW_URL=http://openclaw:8080
      - NEXT_PUBLIC_KILO_CODE_URL=http://chicken-hawk:8081
    volumes:
      - frontend-cache:/app/.next/cache
    restart: unless-stopped
    healthcheck:
      test: ["CMD", "curl", "-f", "http://localhost:3000/api/health"]
      interval: 30s

  # =====
  # ACHEEVY ENGINE - Main Orchestrator
  # (Powered by: ii-agent, II-Commons, OpenClaw)
  # =====
  acheevy-engine:
    build: ./services/acheevy-engine
    container_name: acheevy-engine
    expose:
      - "8000"
    networks:
      - aims_net
    environment:
      - OPENROUTER_API_KEY=${OPENROUTER_API_KEY}
      - GEMINI_API_KEY=${GEMINI_API_KEY}
```

```

    - II_COMMONS_URL=http://ii-commons:8001
volumes:
    - acheevy-data:/app/data
    - acheevy-logs:/app/logs
restart: unless-stopped
depends_on:
    - ii-commons

# =====
# II-COMMONS - RAG & Knowledge Base
# =====
ii-commons:
    build: ./services/ii-commons
    container_name: ii-commons
    expose:
        - "8001"
    networks:
        - aims_net
    volumes:
        - ii-commons-data:/app/data
        - ii-commons-vectors:/app/vectors
    restart: unless-stopped

# =====
# OPENCLAW - Advanced Automation
# =====
openclaw:
    image: ghcr.io/openclaw/openclaw:latest
    container_name: openclaw
    expose:
        - "8080"
    networks:
        - aims_net
    environment:
        - OPENROUTER_API_KEY=${OPENROUTER_API_KEY}
    volumes:
        - openclaw-data:/app/data
    restart: unless-stopped

# =====
# THE CHICKEN HAWK - KiloCode Executor
# =====
chicken-hawk:
    build: ./services/chicken-hawk
    container_name: chicken-hawk
    expose:
        - "8081"
    networks:
        - aims_net
    environment:
        - PYTHONUNBUFFERED=1
        - SANDBOX_DIR=/sandbox
    volumes:
        - chicken-hawk-data:/app/data
        - chicken-hawk-sandbox:/sandbox
    restart: unless-stopped

```

```

    security_opt:
      - no-new-privileges:true

# =====
# AVVA NOON - Agent Zero (Conversational AI)
# =====
avva-noon:
  image: ghcr.io/agent-zero/agent-zero:latest
  container_name: avva-noon
  expose:
    - "8002"
  networks:
    - aims_net
  environment:
    - OPENROUTER_API_KEY=${OPENROUTER_API_KEY}
  volumes:
    - avva-noon-data:/app/data
    - avva-noon-memory:/app/memory
  restart: unless-stopped

# =====
# BOOMERANGS ORCHESTRATOR
# (Manages: ManagerAng, EngineerAng, MarketerAng, etc.)
# =====
boomerangs-hub:
  build: ./services/boomerangs-hub
  container_name: boomerangs-hub
  expose:
    - "8003"
  networks:
    - aims_net
  environment:
    - KIMI_API_KEY=${KIMI_API_KEY}
    - N8N_URL=http://n8n:5678
  volumes:
    - boomerangs-data:/app/data
  restart: unless-stopped
  depends_on:
    - n8n

# =====
# N8N - Workflow Automation
# =====
n8n:
  image: n8nio/n8n:latest
  container_name: n8n
  expose:
    - "5678"
  networks:
    - aims_net
  environment:
    - N8N_BASIC_AUTH_ACTIVE=true
    - N8N_BASIC_AUTH_USER=admin
    - N8N_BASIC_AUTH_PASSWORD=${N8N_PASSWORD}
  volumes:
    - n8n-data:/home/node/.n8n

```

```

    restart: unless-stopped

# =====
# CLAUDE CODE SANDBOX (Optional)
# =====
claude-code-sandbox:
  image: docker:dind
  container_name: claude-code-sandbox
  privileged: true
  networks:
    - aims_net
  environment:
    - ANTHROPIC_API_KEY=${ANTHROPIC_API_KEY}
  volumes:
    - claude-code-projects:/workspace
    - claude-code-cache:/var/lib/docker
  restart: unless-stopped
  command: ["dockerd-entrypoint.sh"]

# =====
# GATEWAY - Nginx Reverse Proxy
# =====
gateway:
  image: nginx:alpine
  container_name: aims-gateway
  ports:
    - "127.0.0.1:8080:80"
  volumes:
    - ./services/nginx/gateway.conf:/etc/nginx/nginx.conf:ro
    - ./services/nginx/logs:/var/log/nginx
  networks:
    - aims_net
  restart: unless-stopped
  depends_on:
    - frontend
    - acheevy-engine
    - openclaw
    - chicken-hawk
    - avva-noon

networks:
  aims_net:
    driver: bridge

volumes:
  frontend-cache:
  acheevy-data:
  acheevy-logs:
  ii-commons-data:
  ii-commons-vectors:
  openclaw-data:
  chicken-hawk-data:
  chicken-hawk-sandbox:
  avva-noon-data:
  avva-noon-memory:
  boomerangs-data:

```

```
n8n-data:
claude-code-projects:
claude-code-cache:
```

▮ Antigravity Agent Configuration for VPS

Step 1: Install Antigravity on Your VPS

```
# SSH into Hostinger VPS
ssh root@your-vps-ip

# Install Node.js 20+ (required)
curl -fsSL https://deb.nodesource.com/setup_20.x | bash -
apt-get install -y nodejs

# Install Antigravity CLI
npm install -g @google/antigravity-cli

# Authenticate (will open browser, copy token back to VPS)
antigravity auth login

# Verify installation
antigravity --version
```

Step 2: Configure Antigravity for AIMS

Create `.antigravity/config.yaml` in your project root:

```
workspace: /var/www/aims
model: gemini-2.0-flash-exp
auth:
  type: service-account
  key_path: /etc/aims/service-account.json

skills:
  enabled:
    - docker-containerization
    - aims-deployment
    - nginx-config
    - hostinger-vps

hooks:
  pre-deploy:
    - validate-docker-compose
    - check-env-vars
    - test-container-builds

  post-deploy:
    - verify-health-checks
    - update-gateway-config
    - notify-slack
```

```
integrations:
  docker:
    socket: /var/run/docker.sock
    compose_version: "3.8"

  hostinger:
    vps_plan: cloud-startup
    region: us-east
```

Step 3: Create AIMS Skills for Antigravity

```
mkdir -p /var/www/aims/.antigravity/skills
```

File: .antigravity/skills/aims-deployment.md

```
---
name: aims-deployment
displayName: AIMS Deployment Orchestrator
version: 1.0.0
role: devops
status: active
tags:
  - docker
  - deployment
  - containerization
visibility: internal
description: Automates the deployment of containerized OSS tools for AIMS platform
---

# ROLE
You are the AIMS Deployment Specialist. Your job is to take ANY open-source tool and pack

# OBJECTIVES
- Containerize OSS tools with minimal user configuration
- Expose web UIs for CLI-only tools
- Implement secure defaults
- Provide one-click deployment
- Enable customization without breaking containerization

# WORKFLOW

## Phase 1: Tool Analysis
1. Identify if tool is CLI, library, or service
2. Check if official Docker image exists
3. Assess dependencies (databases, APIs, etc.)
4. Determine optimal base image (Alpine, Ubuntu, etc.)

## Phase 2: Dockerfile Creation
```dockerfile
FROM node:20-alpine AS builder
WORKDIR /app
Build steps...
```

```
FROM node:20-alpine AS runner
WORKDIR /app
RUN addgroup --system --gid 1001 nodejs && \
 adduser --system --uid 1001 appuser
USER appuser
EXPOSE 3000
CMD ["node", "server.js"]
```

### Phase 3: Web UI Wrapper (If CLI-only tool)

- Create Express.js or FastAPI wrapper
- Implement WebSocket for real-time output
- Add basic authentication
- Provide file upload/download if needed

### Phase 4: docker-compose Integration

```
new-tool:
 build: ./services/new-tool
 container_name: new-tool
 expose:
 - "8080"
 networks:
 - aims_net
 environment:
 - CONFIG_VAR=${CONFIG_VAR}
 volumes:
 - new-tool-data:/app/data
 restart: unless-stopped
```

### Phase 5: Gateway Routing

Add to gateway.conf:

```
location /new-tool/ {
 proxy_pass http://new-tool:8080/;
 proxy_http_version 1.1;
 proxy_set_header Host $host;
}
```

## ANTI-PATTERNS

- ✗ Do NOT expose ports directly to host (use gateway)
- ✗ Do NOT run containers as root
- ✗ Do NOT hardcode secrets (use env vars)
- ✗ Do NOT skip health checks

\*\*\*

## 📌 **AIMS Business Model: Containerization-as-a-Service**

### **Value Proposition**

> **"Any OSS Tool. Any User. One Click."**

AIMS makes **complex open-source tools accessible to non-technical users** by:

1. **Dockerizing Everything**: Pre-configured containers with secure defaults
2. **Exposing Web UIs**: Turn CLI tools into web apps
3. **One-Click Deploy**: Users click "Launch" and get a working app
4. **Customization Layer**: Advanced users can tweak configs without breaking containers
5. **Managed Updates**: Automatic container updates, zero downtime

### **Revenue Streams**

Tier	Price/Month	Features
<b>Starter</b>	\$19	5 containers, 2GB RAM, community support
<b>Professional</b>	\$49	20 containers, 8GB RAM, priority support
<b>Enterprise</b>	\$199	Unlimited containers, 32GB RAM, white-label, API access

### **Target Customers**

- **Non-Technical Founders**: Want to use n8n, Supabase, Metabase but can't configure the
- **Agencies**: Need to spin up client tools (CRMs, analytics, automation) quickly
- **Freelancers**: Want personal toolstack without DevOps knowledge
- **SMBs**: Need enterprise tools without enterprise complexity

\*\*\*

## 📌 **AIMS vs. Traditional Hosting**

Feature	Traditional VPS	Managed SaaS	<b>AIMS</b>
Configuration	Manual	None (locked)	<b>Guided + Customizable</b>
Tool Choice	Unlimited but complex	Fixed	<b>OSS catalog + Custom</b>
UI Access	SSH/CLI only	Web only	<b>Both</b>
Cost	Low but time-consuming	High	<b>Mid-tier, time-saving</b>
Updates	Manual	Automatic	<b>Automatic + Rollback</b>

\*\*\*

## 📌 **Implementation Roadmap**

### **Phase 1: MVP (Weeks 1-4)**

- ✓ Core containers: ACHEEVY, OpenClaw, KiloCode, n8n
- ✓ Basic Next.js frontend
- ✓ One-click "Launch Tool" buttons
- ✓ Stripe billing integration

### **Phase 2: Tool Expansion (Weeks 5-8)**

- ✓ Add 10 popular OSS tools (Supabase, Metabase, Directus, etc.)

- ✓ Custom container request system
- ✓ API for programmatic deployment

```

Phase 3: White-Label (Weeks 9-12)
- ✓ Reseller program
- ✓ Custom branding
- ✓ Multi-tenant architecture

📦 **Security for AIMS**

Container Isolation
```yaml
services:
  user-tool:
    security_opt:
      - no-new-privileges:true
      - apparmor:docker-default
    cap_drop:
      - ALL
    cap_add:
      - NET_BIND_SERVICE
    read_only: true
    tmpfs:
      - /tmp
    user: "1001:1001"

```

Network Segmentation

```

networks:
  frontend_net:
    internal: false # Public-facing
  backend_net:
    internal: true # Internal services only
  data_net:
    internal: true # Databases only

```

📦 Next Steps to Launch AIMS

1. ✓ **Finalize container list** (OpenClaw, Agent Zero, n8n, etc.)
2. ✓ **Build Next.js admin panel** with Stitch UI
3. ✓ **Set up Stripe billing** (subscription + usage-based)
4. ✓ **Deploy to Hostinger VPS** using the docker-compose above
5. ✓ **Create landing page** explaining AIMS value prop
6. ✓ **Launch beta** with 10 early adopters

Bottom Line:

- **Claude Code:** ✓ Containerizable via Docker Sandboxes^[1]
- **Claude Agent SDK:** ✓ Designed for Docker/gVisor^[3]
- **Google Antigravity:** ✗ Desktop IDE (but can manage Docker via MCP)^[6]
- **AIMS Business Model:** ☐ **Brilliant positioning** - "Dockerization-as-a-Service" fills a real market gap

Ready to containerize the world? ☐
